

Cover letter for Boris Dev for Software Engineer position at Astra

I can build data tools by moving backwards from finding the key stakeholder and asking about the nature of their unanswered questions. Examples of this type of entrepreneurial work include:

- I have proposed, designed, and built observability tools for engineering teams.
- I have re-built the development environment for a 5 front-end developers team.
- I have built business analytics tools for execs.

I am ready for cross-functional team work, for example:

- I have experience right in the middle of product, data science, and engineering.
- I have worked with professors, corporate VPs, startup founders, you data scientists, and engineers.
- I have created new work processes for better collaboration.
- I have supported the data science teams with data pipelines.

On the technical side:

- I am strong in Python.
- TypeScript is no problem for me since I have experience with AngularJS.
- I am getting my head around Go – excited to learn more about Go Routines and Channels.

Sincerely, Boris Dev boris.dev@gmail.com
