Hiring Manager

Transcarent — Healthcare Data Analyst, Care Delivery

Dear Hiring Manager,

I'm applying for the Healthcare Data Analyst role on the Care Delivery team because the core problem — turning messy clinical operational data into decisions that clinical leaders actually trust and act on — is the kind of work I've done repeatedly, across industries, for 15+ years.

A few data points on fit:

- **SQL against complex multi-source schemas.** At HiQ Labs I led the data engineering team and rebuilt their pipeline from a monolith to microservices; at Sight Machine I owned the analytic endpoint layer that powered our biggest customer-facing analytics feature. I'm comfortable in large relational schemas and writing SQL that has to be right.
- **Dashboards and Tableau lineage.** At Urban Mapping (acquired by Tableau) I built the first performance regression and observability systems that sat underneath Tableau's map tile serving. I've since built plenty of internal dashboards — I know what “self-service that leadership will actually use” looks like vs. what gets ignored.
- **Healthcare context.** I'm the founder of nobsmmed.com, an ontology-grounded GraphRAG tool that lets users search clinical studies and patient posts for treatment insights. I've worked hands-on with clinical literature, medical terminology, and the structural quirks of healthcare data.
- **Predictive modeling validation.** My PhD was in quantitative methods and my work across SimpleLegal, Wolf Games, and Sindri has centered on evaluation — designing rubrics, ground-truth protocols, and QA pipelines that tell you whether a model is actually working. That translates directly to validating the predictive models used for member targeting and clinical program design.

What draws me specifically to Transcarent is the WayFinding premise — that a consumer-first, AI-powered front door can make the system legible to members. I'd like to help build the analytical backbone that lets clinical leaders see, trust, and improve that system day-to-day.

Sincerely, Boris Dev
